1. RA Norway

RA Norway has more than twenty years of experience from design, production and installation of aviation maintenance equipment. Globally we do maintenance of docking systems and ground support equipment for various helicopter-fixed wing types and models.

Our company has in house competencies and experience to design customized maintenance systems in accordance to customer's needs.

In co-operation with our customers, we generate solutions that lead to a safe and efficient way of performing maintenance for our customers. Military and civilian aircraft operators worldwide use our products.

Our products are;

- **Safe for maintenance personal**
- **Cost effective maintenance**
- **Tailored to customers' needs**
- **Light weight**
- **Easy to operate**
- **Maintenance free**
- **Dynamic and fully adjustable**
- **Modular in sections**
- **Extendable with other platforms**
- **No damage to aircraft**
- **Spark free**
- **Equipped with pneumatic, and electrical outlets**
- **Integrated lightning system for optimal working conditions**
- **Designed in accordance to international standards**

1.1 CH 47 Maintenance docking system

Part Name	Maintenance docking system
Part Number	Consist of: <ul style="list-style-type: none"> • Nose Platform • LH Engine Platform • RH Engine platform • Tail Platform

General description:

This docking system supports all maintenance activities on the S-92. It is produced in lightweight aluminum and the floor have an antiskid surface. All edges against the fuselage have a rubber protection band to avoid any harm to the helicopter. There is a variety of options to choose from as lighting, pneumatic and other accessories as described in this brochure.

1.2 Antiskid surface and rubber fender protection

1.3 Heavy duty wheels with brakes

Swivel wheels with brakes, 600kg load per wheel.

1.4 Removable/ telescope railing

In some places it is required to be able to lower the railing.

1.5 Electrical, lights & pneumatic installation

This option has a single point electrical connection on each stand, attached to a numerous electrical connections around the stands. It gives the mechanic easy access to electrical power as they are working around the helicopter. It adds lighting under both side stands and railing to improve the working conditions for the mechanic. The customer may choose from 220V or 110V Installation.

1.6 Maintenance docking system design and load rating

Design for 200 kg/m²

2. Docking System Accessories

2.1 Surface treatment

All ground support accessories are powder coated red to give durability and a nice finish.

2.1.1 Pneumatic Installation

Part Name	Pneumatic Installation
Part Number	RA-S92DSA- 1854-0
AMM Reference	N/A

General description:

This option has a single point pneumatic connection on each stand, connected to a numerous pneumatic connections around the stands. It gives the mechanic easy access to air as they are working around the helicopter.

2.1.2 Electrical installation

Part Name	Electrical Installation
Part Number	RA-CH47DSA- 1857-0 (220 V)
AMM Reference	N/A

General description:

This option has a single point electrical connection on each stand, attached to a numerous electrical connections around the stands. It gives the mechanic easy access to electrical power as they are working around the helicopter. It adds lighting under both side stands to improve the working conditions.

2.1.3 Tail platform fairing interior

Part Name	Tail platforms fairing interior
Part Number	RA-VH47DSA- 1989-0
AMM Reference	N/A

General description:

The tail stand fairing interior is designed to utilize the space under (inside) the tail stand. It has shelves for numerous fairings, cargo compartment linings, tail rotor components, main rotor components and more.

Note: S-92 on picture, same principle for CH-47

2.1.4 Storage cabinet

Part Name	Storage cabinet
Part Number	RA-DSA- 1990-0
AMM Reference	N/A

General description:

The storage cabinets are designed to hold fairing screws, removed component etc. It slides over the side rail and may be positioned where suitable. It is up to each operator to determine how many needed and how to utilize them. The recommendation is one on each side stand and one on the tail stand, three altogether.

2.1.5 Working table

Part Name	Working table
Part Number	RA-DSA- 1987-WT-0
AMM Reference	N/A

General description:

The storage cabinets are designed to hold fairing screws, removed component etc. It slides over the side rail and may be positioned where suitable. It is up to each operator to determine how many needed and how to utilize them. The recommendation is one on each side stand and one on the tail stand, three altogether.

2.1.6 PC table

Part Name	PC table
Part Number	RA-DSA- 1816-0PC
AMM Reference	N/A

General description:

The PC table is designed support a PC for the mechanic during his work. It slides over the side rail and may be positioned where suitable. It is up to each operator to determine how many needed and how to utilize them.
The recommendation is one on each side stand and one on the tail stand, three altogether.

2.1.7 Paper dispenser

Part Name	Paper dispenser
Part Number	RA-DSA- 1852-PD-0
AMM Reference	N/A

General description:

The paper dispenser is designed to support paper rolls. It slides over the side rail and may be positioned where suitable. It is up to each operator to determine how many needed and how to utilize them.

The recommendation is one on each side stand and one on the tail stand, three altogether.

2.1.8 Container for cleaning rags

Part Name	Container for cleaning rags
Part Number	RA-DSA- 1991-0
AMM Reference	N/A

General description:

The container for rags is designed to support paper rolls. It slides over the side rail and may be positioned where suitable. It is up to each operator to determine how many needed and how to utilize them.
The recommendation is one on each side stand and one on the tail stand, three altogether.

3. CH 47 Ground Support Equipment

3.1 General description operation:

Accessories are usable for maintenance and line maintenance docking system.

3.2 Surface treatment

All ground support accessories are powder coated red to give durability and a nice finish.

3.3 Certificate

All equipment as slings etc., will be delivered with a certificate.

3.4 ATA 62 Main rotor

3.4.1 Main rotor blade trolley

Part Name	Main rotor blade trolley
Part Number	
MM Reference	62

General description:

The main rotor blade trolley is designed to support all six main rotor blades when they are removed from the helicopter.

3.5 ATA 25 Rescue hoist cable wash trolley

Part Name	Rescue hoist cable wash trolley
Part Number	RA-GSE-2071-1-RHC

General description:

The Rescue hoist-cable wash trolley is designed for safe and easy washing of rescue cable after use. The trolley consists of a wash basin and a drum that reels the cable. The drum is equipped with adjustable braking system that ensures correct tension when spooling the cable.
